

GPT-COT:

“Extra-axial lesion in the left frontal region with mass effect and compression of adjacent brain parenchyma.”

S-Chain Dataset:

“No atrophy, no widening of the temporal horn of lateral ventricle. Only widening of choroid fissure.”

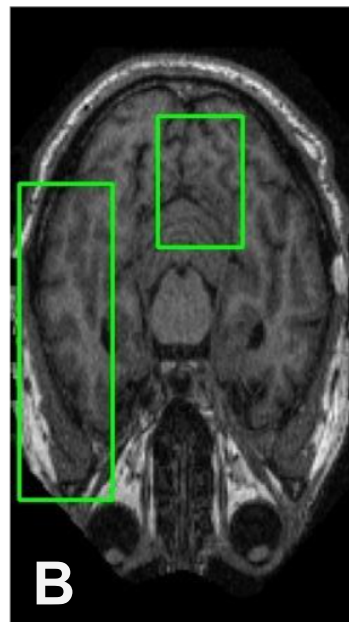

GPT-COT:

“Irregular hyperintense lesion in the left frontal cortex near the convexity, consistent with a mass or tumor; localized cortical disruption and surrounding edema.”

S-Chain Dataset:

“Mild atrophy opening of sulci.”

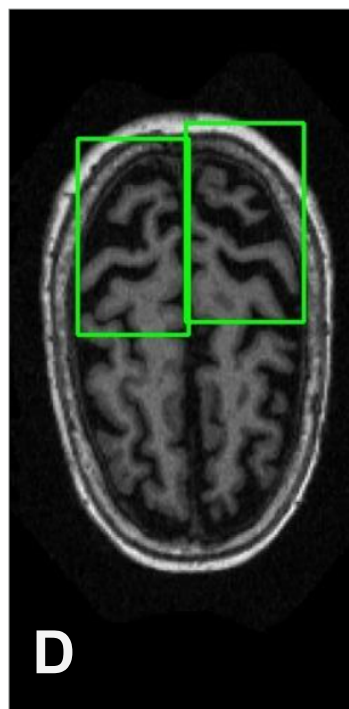

GPT-COT:

“No cortical atrophy, no brain parenchyma atrophy, no interventricular space enlargement, no posterior atrophy.”

S-Chain Dataset:

“Mild atrophy opening of sulci, mild parietal cortical atrophy.”

GPT-COT:

“No atrophy, normal cortical thickness, and no sulcal widening.”

S-Chain Dataset:

“Severe end-stage atrophy knife blade, substantial widening of sulci.”
